

Sweat

FIND THE SONG.

(Most artists never find out)

**You've got a catalogue.
Somewhere in it there might be
a song that could change
everything.**

Most artists never find out which one. They back the track they love, spend what they can afford, and hope. When it doesn't work they've got no idea whether it was the song, the audience or the ads. So they do the same thing on the next release, starting from zero again.

In 90 days you'll know.

We test up to 12 of your songs.

At the end of three months you'll know whether you've got a song that can scale your career, and exactly what it costs to push it.

If you haven't got one yet, we'll tell you that too, and why.

ST LUNDI

(How we find it?)

01 Find the sound

We test every part of the song to see which seconds actually stop someone scrolling.

02 Build the content

Up to 25 visuals per song, made by our editors, trained on what's already winning.

BLOND:ISH

03 Make the call

We tell you whether it's worth scaling, and how hard to push.

04 Watch it land

We track Spotify for Artists daily, country by country, and move the money to where it's converting.

We'll tell you if it's not working.

Plenty of agencies will spend your money for as long as you'll keep giving it to them. We won't.

If a song isn't converting, we say so and move to the next one. That's the whole point of testing 12 of them.

You're not paying us to be optimistic. You're paying us for an answer.

You'll see everything.
We mean everything.

Live dashboard, updated daily. Written status report every week. Full review every month where we go through what the data's saying and what we're doing about it.

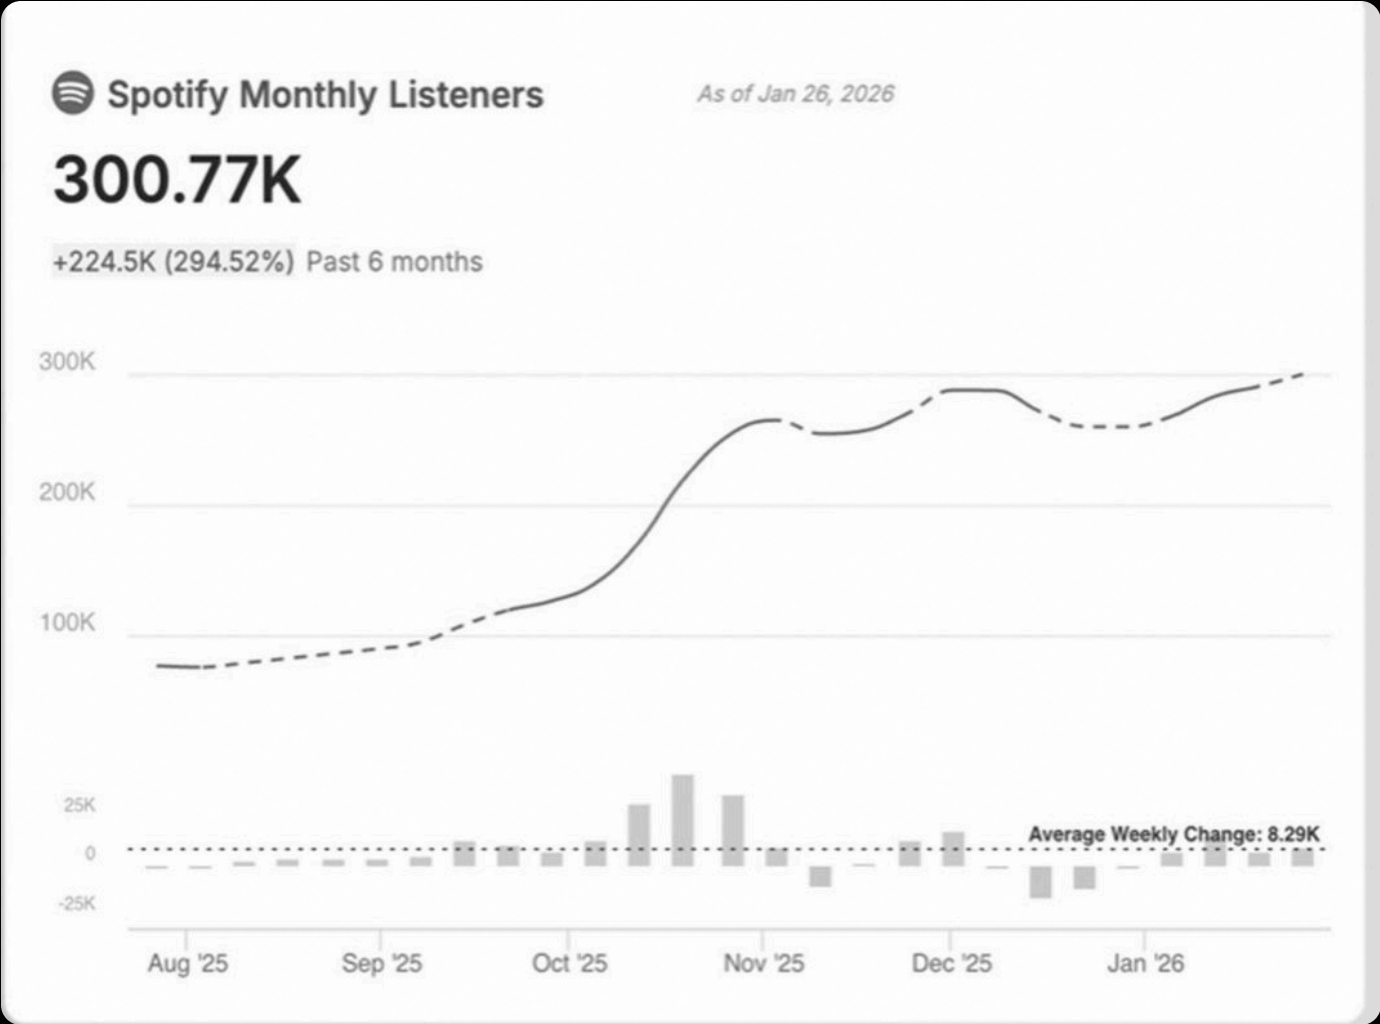

UNLOCKING CATALOGUE VALUE

0 to 300K
monthly listeners.

Most artists ignore their catalogue. We found a track with algorithmic potential and scaled it systematically. Huge growth on modest spend.

THE LISTROS

BREAKING A NEW RELEASE

0 to 8M streams in 90 days.

£6K spend · 24p cost per listener

25+ content variations tested before we scaled a penny. The testing framework was the reason it worked.

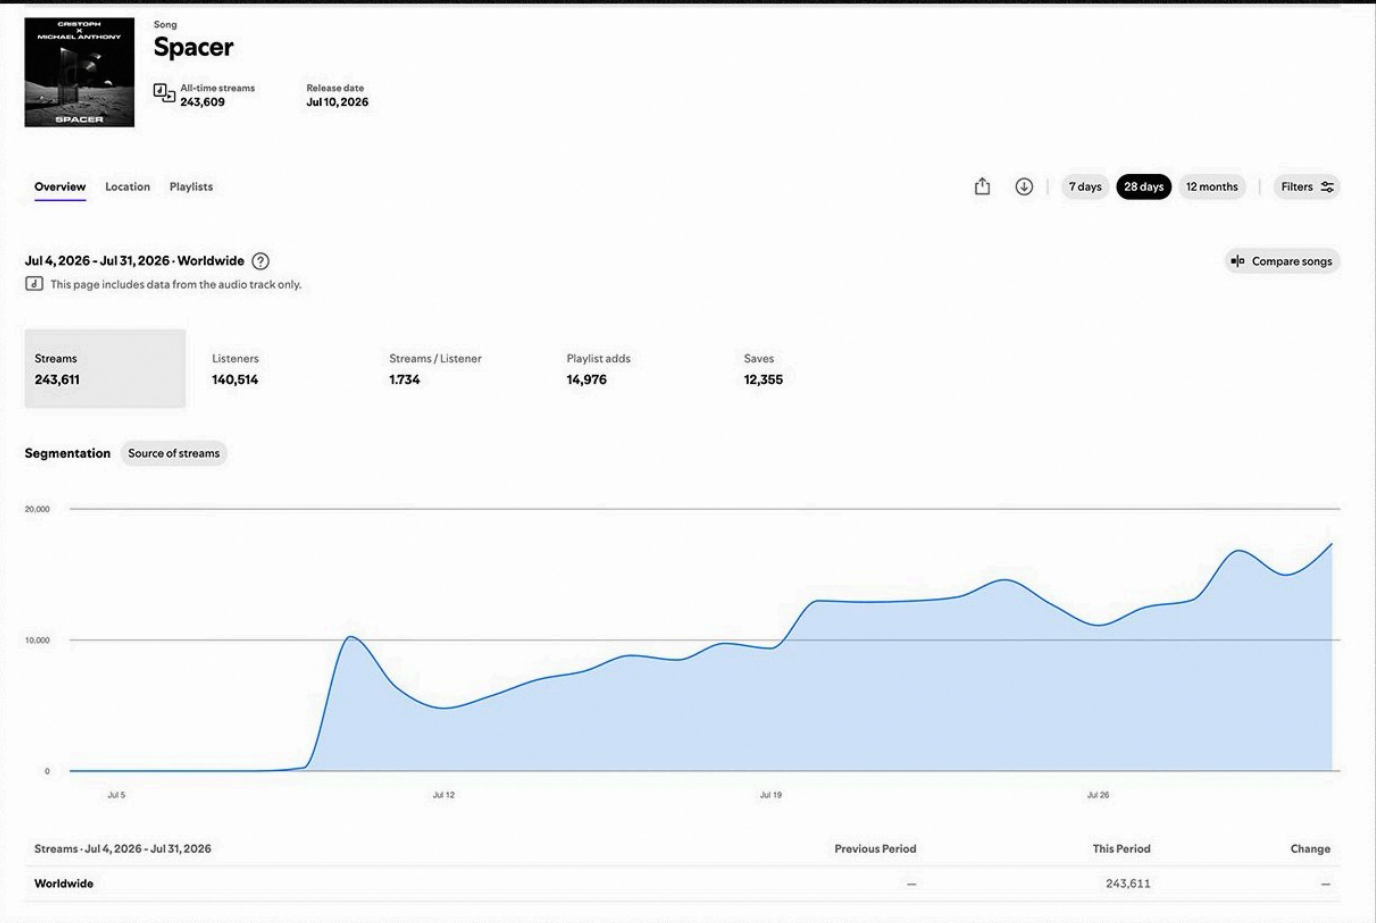

HARRY T

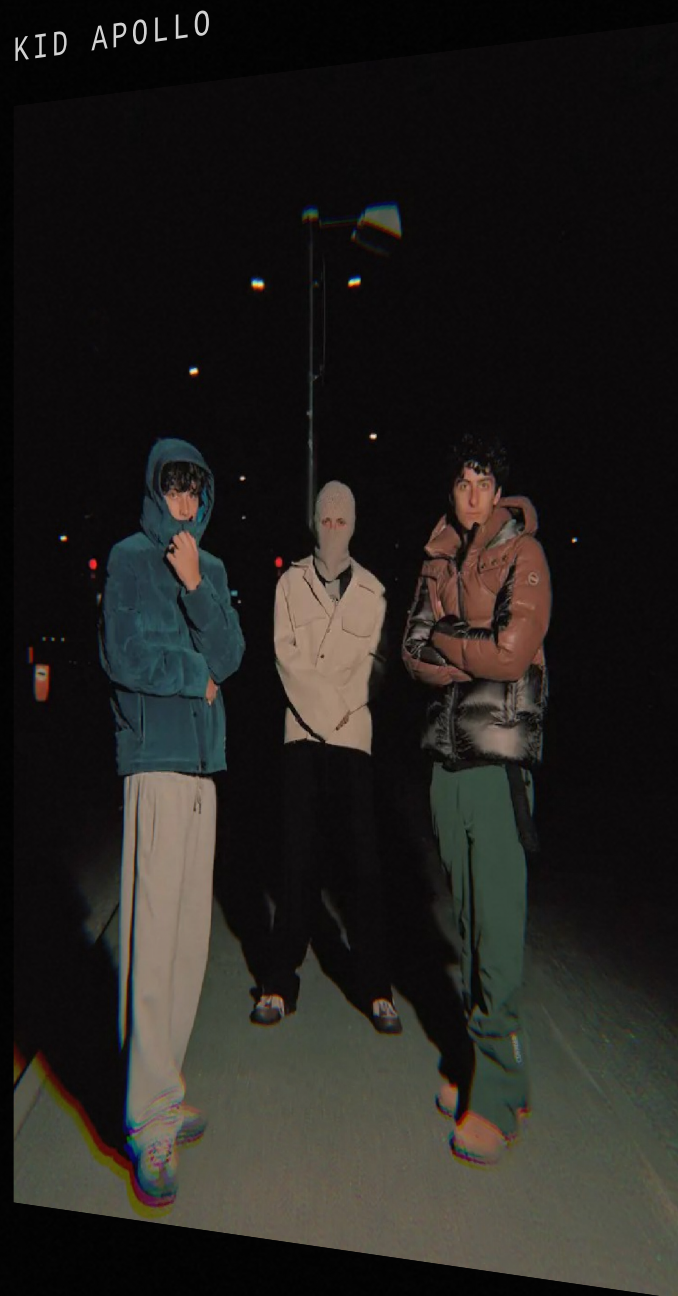

CRISTOPH × MICHAEL ANTHONY – SPACER

0 to 20K daily streams in 3 weeks.

A cold start. Same framework, run on a dance record: find the seconds that stop the scroll, then put weight behind what's already converting.

\$4,500 for (3) three months.

Or \$2,000 a month.

Ad spend on top, minimum \$1,000 a month.

01

Book a call — where you are now, where you want to get to.

02

We pick the songs together.

03

First tests live within a week.

04

Ninety days later, you'll know.

Ready? pj@sweatstrategies.com

(When we find your song)

We put it everywhere it converts.

A song that works on one platform rarely stops there. Once the tests tell us what's landing, we take the winning creative and put budget behind it across every channel that can turn a listener into a fan.

SCALE IT

20% on ad spend above \$5,000 a month. We push as hard as the data says we should.

GROW IT

\$2,500 a month, or \$6,000 for three months. YouTube and TikTok, plus we build your fan capture flow.

Ads rent your listeners. A fan capture flow means you own the audience instead.
