

A woman wearing a light blue hijab and a dark long-sleeved top is performing a yoga pose on a green grassy field. She is in a low lunge position with her right leg bent and her left leg extended back. Her hands are raised towards the sky. The background shows a sunset or sunrise with a warm orange glow on the horizon and a clear blue sky above. The overall mood is peaceful and focused.

Sweat

ST LUNDI · PAID MEDIA

THREE MONTHS • TWO SINGLES AND AN EP

As much content as possible — and a way to know.

“It just seems to be a complete numbers game at the moment. Creating as much content as we possibly can ... as long as there’s a bit of a strategy behind it. And then we can learn from all of these things with the paid ads.”

TOM ROSE, 26 AUGUST

BROOKE CHRISTOPHER, ON THE CALL

There is already a lot here.

None of it needs replacing. Archie and Josefine are making the best content he has ever had; ONErpm has a media team and an influencer team; Brooke has two pages running; Grape and Gold’n Retriever have the shows.

01

The content

Archie and Josefine, plus the Infinity Cove shoot, the Dopamine video and the live session.

02

The media

ONErpm’s in-house team on the official ads, and the influencer team that worked Alaska.

03

The pages

The HQ page and Words of the Wild, both live, both hungry for more than one person can cut.

04

The shows

Nashville, LA and New York on sale, with a team either side of the Atlantic behind them.

What is missing is the thing in the middle: a number that says which of it worked, and therefore what to make next.

One loop, not two teams. Organic tells us what to test. Paid tells us what to make.

01

Post it, then prove it

Whatever holds attention organically gets put behind cold spend to find out whether it converts, or just entertained.

02

Tested, not assumed

Many variants against cold audiences at small money. The winner takes the budget; the rest get dropped without argument.

03

Archie stays out of the churn

His channels keep the high-quality work with Josefine. The trend volume runs elsewhere, which is the whole point of it.

04

A single read

One dashboard the whole group can see, so ONErpm, Grape and Gold'n Retriever are looking at the same day's numbers.

SCOPE OF SERVICES

Five pillars.

- Meta
- TikTok
- reel:lab
- Live & ticketing
- CRM & fan flow

Meta is the engine and the one with the longest record behind it, so the method comes first. Then the four that feed it. YouTube sits inside the Meta pillar rather than beside it – engagement and reach campaigns on the videos, not a separate operation.

(How we find the hit?)

01 Find the sound

We cut the record into sections and test each one against a control visual, to see which seconds actually stop someone scrolling.

02 Test the content at scale

Dozens of variations around the winning sound
— film clips, meme clips, mood videos — against
cold audiences in every market that matters.

03 Validate the cost

Every test returns a real cost per new listener.
That number decides what gets the budget and
what gets dropped.

04 Scale what converts

Budget follows the number, reallocated daily, country by country. America can be the cheapest and Germany still the one worth more per listener.

BONOB0

PILLAR 01

Meta

Every song tested before release, so the money knows where to go.

Twenty-one songs are coming. Micro-spends against cold audiences on each of them, before release, tell us which ones can carry a campaign — so the budget goes hard at the moment that deserves it rather than spreading evenly across a cycle and hoping. On the released records we run UGC-style creative rather than “out now, stream here”, and we boost what earns attention on its own.

01

Pre-release micro-testing

Every song on the EP, at small money, against cold audiences — the plan agreed on 5 August.

Runs on Archie’s page or on a fan page, whichever the team prefers — both work, and it is a preference rather than a performance question.

02

UGC over announcements

Creative built to be watched rather than obeyed, then put behind spend once it proves it holds.

03

Read on Spotify, not on Meta

Spotify for Artists is the scoreboard: which markets convert, which retain, and what a listener really costs.

PILLAR 02

TikTok

Put money behind what already earned attention.

Audience targeting pointed at the posts that have already done something on their own. Reach and audience growth is what the platform gives you, so that is what we buy – and anything that performs here becomes a Meta test the same week, which is the loop Tom described.

01

Winners only

Spend goes behind posts that have proven they hold attention, never behind untested assets.

02

Straight into the Meta tests

What works organically gets a cold-audience test within days, so TikTok stops being a separate scoreboard.

03

Seeding where it fits

Our networks are there if the record needs to be in other people’s videos – alongside the ONErpm influencer team, not instead of it.

PILLAR 03 · IN BETA

reel:lab

The trend volume, without Archie having to be in it.

Tom’s ask on the call: keep Archie’s own channels for the high-quality work with Josefine, and find another way to be present in trends. reel:lab is our own product for exactly that — branded fan accounts posting original AI content, each with its own identity, able to cross-pollinate. For St Lundi we would build out sub-brands around the record and run lip-sync and performance content through them. The ones that win become Meta ads.

01

Sub-brands, not clones

Distinct accounts with their own look and subject, so the output does not read as one bot posting fifty times.

02

Lip-sync and performance

The trend-shaped content that works as an ad, made without needing another day of Archie’s time.

03

Winners become ads

Anything that performs organically goes into the same cold-audience testing as everything else.

Said plainly: reel:lab is in beta. 120 accounts live today, scaling towards 1,000 by Christmas. Some of it is working well and some of it is experimental, and it is priced per scope rather than folded into the retainer — so it can be tried on one EP without committing the campaign to it.

PILLAR 04

Live & ticketing

Nashville, LA and New York, run as campaigns rather than blasts.

Tour advertising usually goes out as a wall of spend at on-sale and another on pay-day weekend, against targeting nobody has questioned in years. It sells the tickets that were going to sell anyway and tells you nothing about the rest of the room. We test the creative first, spend steadily across the whole on-sale, and read cold and warm funnels apart, every day.

01

Tested content first

Creative tested the way we test a record, before any budget goes behind it.

02

Steady, not spiked

Consistent pressure across the on-sale, ramped at the moments that actually move.

03

Ticketing at no cost

Through david.tickets we can take the ticketing itself for nothing, and the team gets live access to its own ticket data.

SHOWS WE'VE WORKED ON WITH

Live Nation

AEG

Communion One

(The audience you actually own)

A follower is rented. An email address isn't.

Every platform decides who sees Archie and changes its mind without telling anyone. A list he built himself is the only audience that survives that, and the only one reachable on the day a single, an EP or a show goes live.

So there is a capture underneath everything else in this deck. The paid media buys the attention; the CRM keeps it. This is the flow, end to end — and it runs on its own once it is built.

From a new follower to a real conversation.

“Hey — obviously this was automated. But I’m a real person, and I’m glad you’re here. I’m in my DMs if you want to say hey.”

Admitting it is what makes the sequence survive a fan who can tell. Everything before this runs on its own; Archie records the voice note once.

A dashboard, daily.

Not a monthly report.

Sweat.fm is our own platform. Every campaign, every cost per result, every market, updated daily – and visible to ONErpm, Grape and Gold’n Retriever at the same time, so four organisations are reading one set of numbers instead of forwarding each other three.

SKELETON TIMELINE

Three months, two singles and an EP.

01

Month one · single one

Handover of the Meta account and the pixel. Sound tests on single one and on every unreleased song we have audio for. Alaska read through discovery mode. First reel:lab sub-brands live if that pillar is in.

02

Month two · single two

Single two launches on a sound we have already tested rather than a guess. Content scaled around the winners. Fan flow built and switched on. US show campaigns running against the on-sales.

03

Month three · the EP

The EP goes out knowing which track carries it and what a listener costs in each market. Budget weighted to that, not spread evenly. Full read on the quarter, and a decision on the next two EPs.

Deliberately no dates in it. Tom flagged that the EP timeline was going to your weekly — give us those dates and this becomes a calendar rather than a shape, in an afternoon.

EXPECTED RESULTS

The numbers we hold ourselves to.

Not a forecast. Nobody can promise a result on an unreleased record, and it was said on the call that these are hard to generate. What we can do is name exactly which numbers decide things, what we have hit on comparable campaigns, and agree now what would count as working.

01

Cost per listener

The number that decides everything. Across the campaigns in our case studies it runs 14p to 24p.

02

Hook and hold

Read per asset. It is what tells us a piece of content is worth scaling before the spend proves it.

03

Spotify retention

Above 1% is good, above 2% is strong – the benchmark the team is already using on Alaska.

04

Emails captured

The one output that keeps its value after the campaign stops. Reported weekly like everything else.

And the promise that costs us money to keep: if a song is not converting, we say so and move to the next one.

FEES & COSTS

Half our list price.

META ONLY

£750 ~~£1,500~~

A month. The engine on its own – sound testing, creative testing, the buying, and the Spotify read behind it. £2,250 across the three months.

ALL PLATFORMS

£1,250 ~~£2,500~~

A month. Meta plus TikTok, YouTube, the live campaigns and the CRM fan flow, run as one operation. £3,750 across the three months.

ON TOP OF THE FEE

01

Ad spend

Billed at cost, never marked up. The testing plan we agreed runs about £700 an EP – roughly £10 an asset, £50–150 a song.

02

reel:lab

Quoted per scope once you decide how many sub-brands and how much volume. Not folded into the retainer.

03

Influencer seeding

Per campaign, at cost plus our fee – and only where the ONErpm team is not already covering it.

Three months, then a decision on the next two EPs. No longer tie-in than that.

What we'd need from you.

01

Access

Meta Business Manager, the pixel, and Spotify for Artists. Read-only is enough to start.

02

The audio

Rough or finished, for every song we are testing ahead of release. Nothing leaves our hands.

03

The dates

Single one, single two, the EP, and the Infinity Cove shoot – whatever the weekly settles on.

04

One approver

One name who can sign off creative same-day. With four organisations on the call, this is the thing that decides pace.

Let's start with single one.

You said you'd like us to work with you. This is the shape of it — pick a tier, send the dates, and we can be testing sound inside a week.

01

Pick a tier — Meta, or all platforms.

02

Access and audio over, dates confirmed off your weekly.

03

Sound tests live within a week.

04

Three months later, a decision on the next two EPs.
